Checker SERVICE

GOES 'ROUND THE WORLD

From Norway to Tahiti, from Uruguay to Saudi Arabia — wherever taxicab operators know and rely upon built-in quality and economy for profitable operation, the Checker Cab is famous for its rugged dependability and low-cost maintenance.

And no place on earth is too far from Checker's always-helpful, speedy and inexpensive service. Operators the world over have learned that their every request receives quick and expert attention from Checker by the fastest possible means.

They welcome, too, Checker's *Service Bulletin*, a regular and authoritative publication which gives to them *free* automotive knowledge which flows constantly from Checker's engineering laboratories and which is tested and proved over millions of miles of operation each month.

Famous names are a part of Checker Cabs, names in which the world has trust and confidence. *Wagner* hydraulic brakes. *Zenith* carburetor. *Auto-Lite* generator. *Willard* battery. *Warner Gear* transmission. *Borg & Beck* clutch. *Continental* 6-cylinder engine. Reversed *Elliot* type main beam front axle and *Spicer* rear axle. The *best* in automotive engineering is part of the Checker 6-passenger taxicab and 8-passenger limousine.

Checker Cabs are operating today under every climatic condition—in Venezuela and Syria, in Portugal and Japan, in the Indies, in Switzerland, in Africa and in other areas pictured here—wherever sturdy *dependability* and *economy* are foremost in the minds of successful operators.

Let us tell you how Checker Cabs can improve your business and lower your operating costs, no matter where you may be. Write today for Checker's big, free, colorful illustrated brochure.
